If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

**DETAILED ACTION**

**EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with George A Smith Jr on 12/5/08.

The application has been amended as follows:

Claim 22, lines 2-4 delete "in which said controller...of the food articles, and".

Claim 23, lines 2-4 delete "in which said controller...of the food articles, and".

Page 5, line 3 of the specification after "toward the" insert --fuel supporting area--.

***Allowable Subject Matter***

2. Claims 1, 3-8, 10-14, 22-23, and 25-26 are allowed.

3. The following is an examiner's statement of reasons for allowance: the cooking apparatus of independent claim 1 defines over the prior art of record because the prior art does not teach, suggest, nor render obvious an enclosure having a food support for an article of food to be cooked, and a fuel support for solid fuel, the supports having food supporting and fuel supporting areas respectively, said areas being displaced from each other sufficiently that cooking of a food article on said food supporting area by fuel on said fuel supporting area can take place, at least in substantial part, as a result of

Art Unit: 1794

contact between said food article and hot gas produced by combustion of said fuel; an inlet opening for flow of air into the enclosure; an impeller arranged to cause air to flow, through said inlet opening, from the exterior of said enclosure into the interior thereof, and to impinge upon solid fuel on said fuel supporting area; an electric motor arranged to operate the impeller; a first temperature sensor for sensing the temperature of the atmosphere within said enclosure in the vicinity of an article of food on said food support, and providing a first output signal; a second temperature sensor for sensing the internal temperature of a food article on said food support and providing a second output signal; and a programmed controller, responsive to said first output signal, for controlling operation of said electric motor, said controller being programmed to cause the impeller to increase the flow of air into the interior of said enclosure with decreasing temperature of said atmosphere and to decrease said flow of air with increasing temperature of said atmosphere, whereby said atmosphere is maintained substantially at a set point temperature; said controller being also programmed to respond to said second output signal to reduce said set point temperature as the internal temperature of said food article increases, and to regulate, over an interval of time, the rate at which the set point temperature is reduced in dependence on the internal temperature of said food article as sensed by said second temperature sensor, said interval of time beginning with a time at which the internal temperature of said food article reaches a predetermined level; in which said controller includes a manually operable adjuster for setting a target temperature for the internal temperature of the food article, and is said target temperature by a predetermined amount and to hold the temperature of the

Art Unit: 1794

atmosphere within said enclosure at least at said temperature level until fuel on said fuel support is no longer able to maintain said temperature level.

4. The following is an examiner's statement of reasons for allowance: the cooking apparatus of independent claim 8 defines over the prior art of record because the prior art does not teach, suggest, nor render obvious an enclosure having a food support and a solid fuel support; an inlet opening for flow of air into the enclosure; an impeller arranged to cause air to flow into the enclosure through said inlet opening and impinge upon solid fuel on said solid fuel support; a first temperature sensor for sensing the temperature of the atmosphere within said enclosure in the vicinity of an article of food on said food support; a second temperature sensor for sensing the internal temperature of said article of food on said food support; and a programmed controller, programmed to respond to said first temperature and said second temperature sensor, for operating said impeller and causing the flow of air toward said solid fuel to maintain the temperature of said atmosphere within said enclosure substantially at a set point determined by the internal temperature sensed by said second temperature sensor, and to regulate the operation of said impeller over an interval of time, thereby reducing said set point as said internal temperature increases, at a rate depending on the internal temperature of said food article as sensed by said second temperature sensor, said interval of time beginning with a time at which the internal temperature of said food article reaches a predetermined level; in which said controller includes a manually operable adjuster for setting a target temperature for the internal temperature of the food article, and is programmed to cause said set point temperature said target

Art Unit: 1794

temperature by a predetermined amount and to hold the temperature of the atmosphere within said enclosure at least at said temperature level until fuel on said fuel support is no longer able to maintain said temperature level.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
